

Data in hand, exam passed.

The exam simulation platform that leads your students to success and simplifies the instructors' work.

Exam preparation: from an obligation to a competitive edge.

The success of your students is your best business card. An inaccurate theoretical exam preparation or one based on obsolete tools can generate anxiety, delays, and failures, undermining the reputation of your school.

Today, you can transform this crucial phase into an interactive, monitored, and extremely effective learning experience. Our platform is not just a quiz database. It is an intelligent training ecosystem designed to identify gaps, reinforce knowledge, and give you and your students the utmost confidence for exam day.

The ultimate platform for flight
exam preparation.

STUDENTS

Total Prep, Zero Distractions

Offer your students a tool that guides them step-by-step toward passing their exam.

All questions included

100% complete and always up-to-date preparation. No surprises on exam day.

Realistic exam simulations

Accustom students to the structure, pressure, and timing of the real exam.

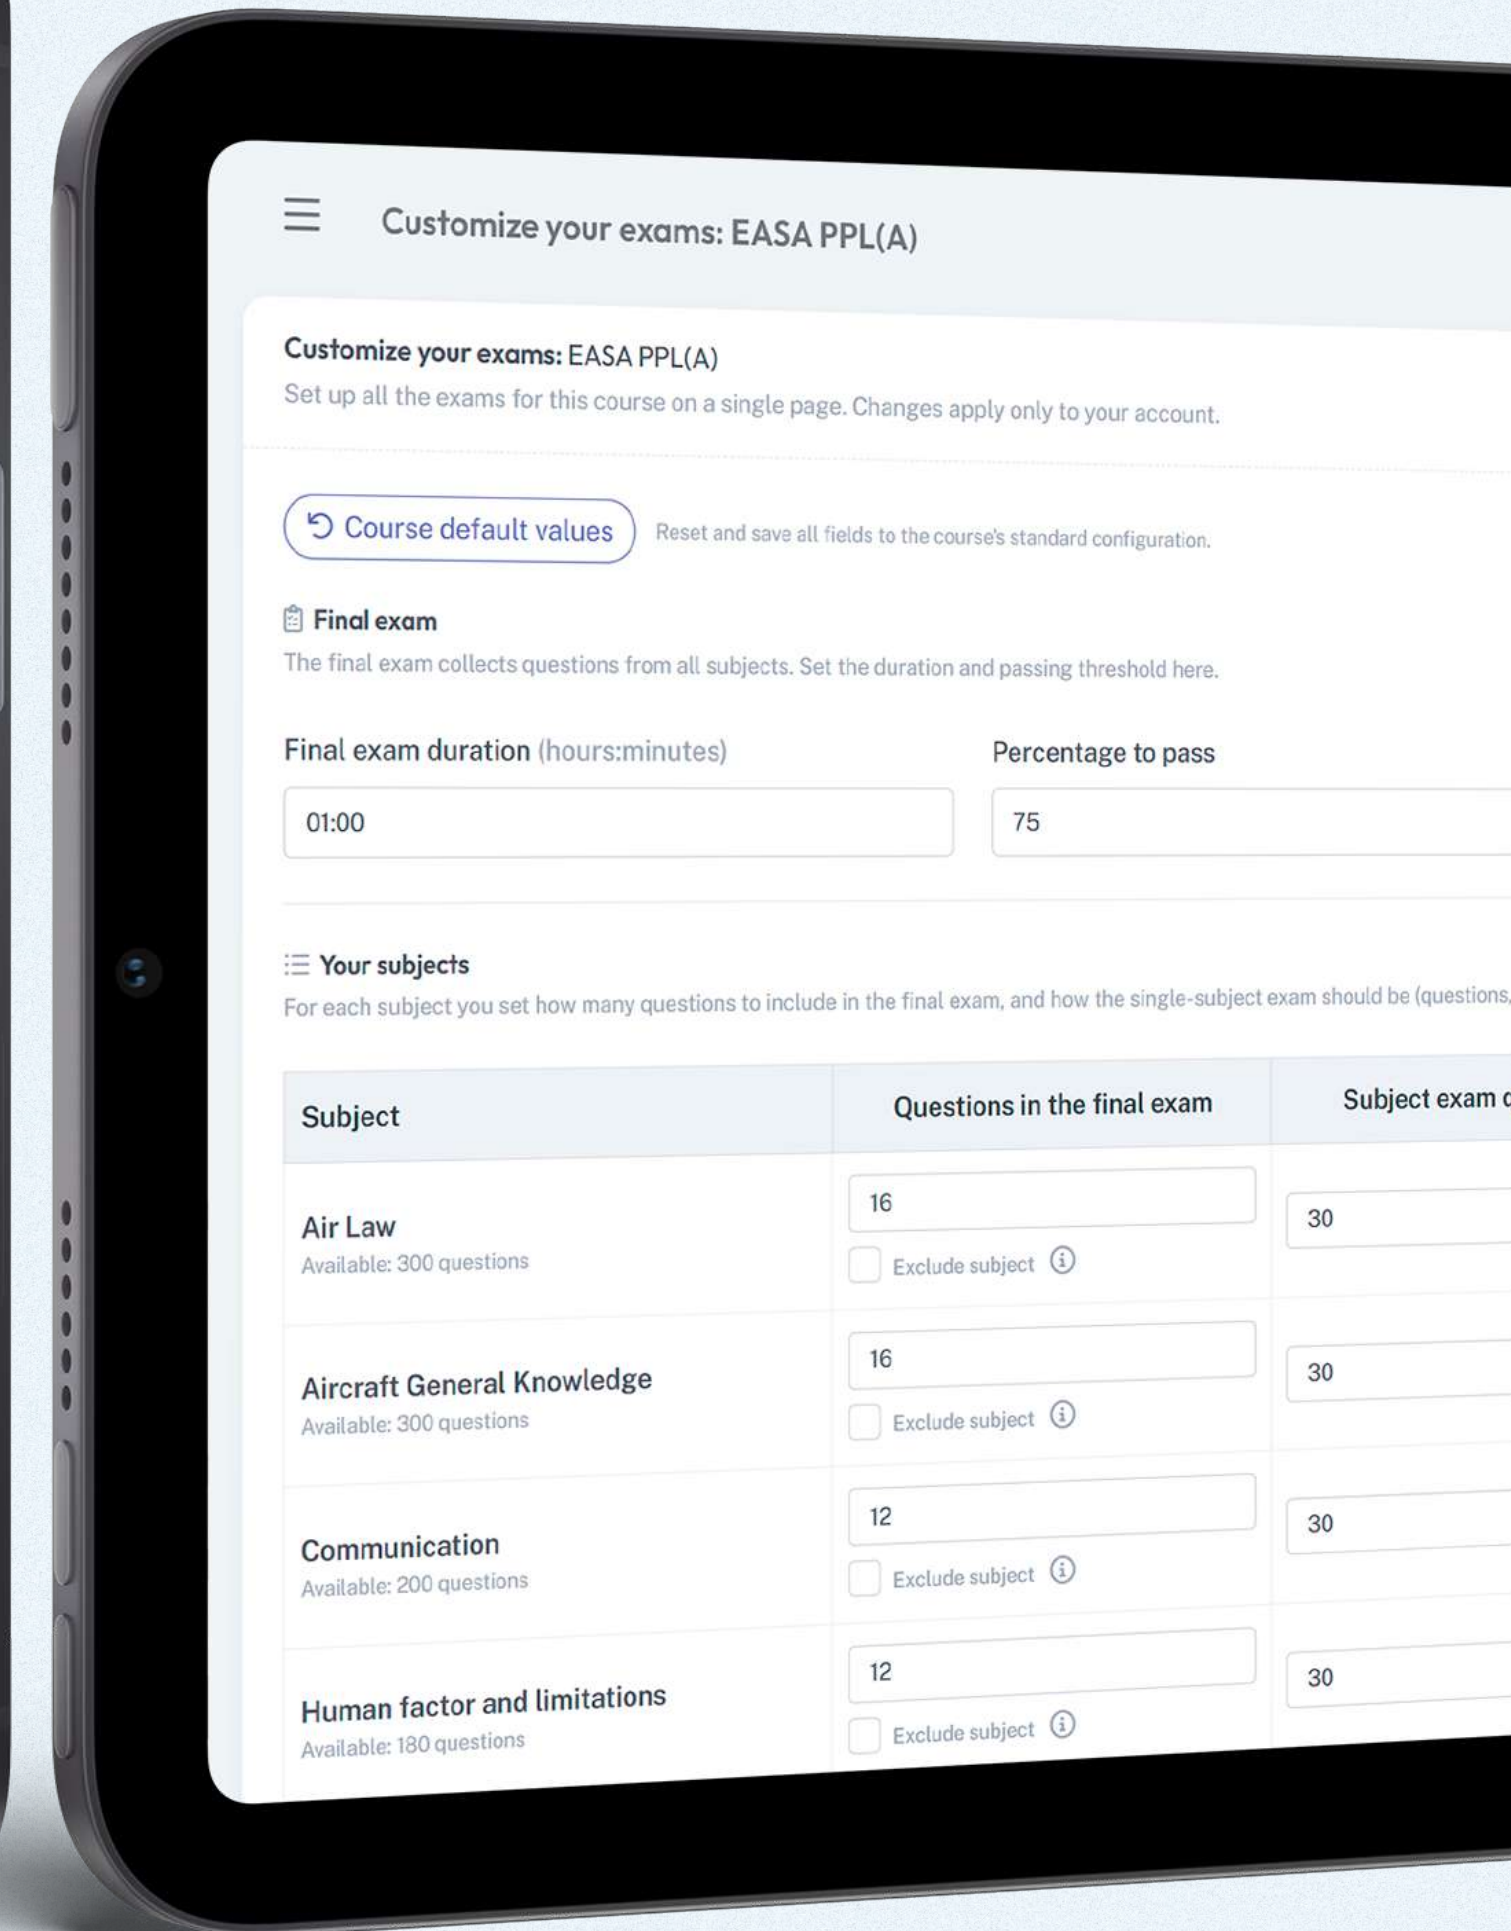

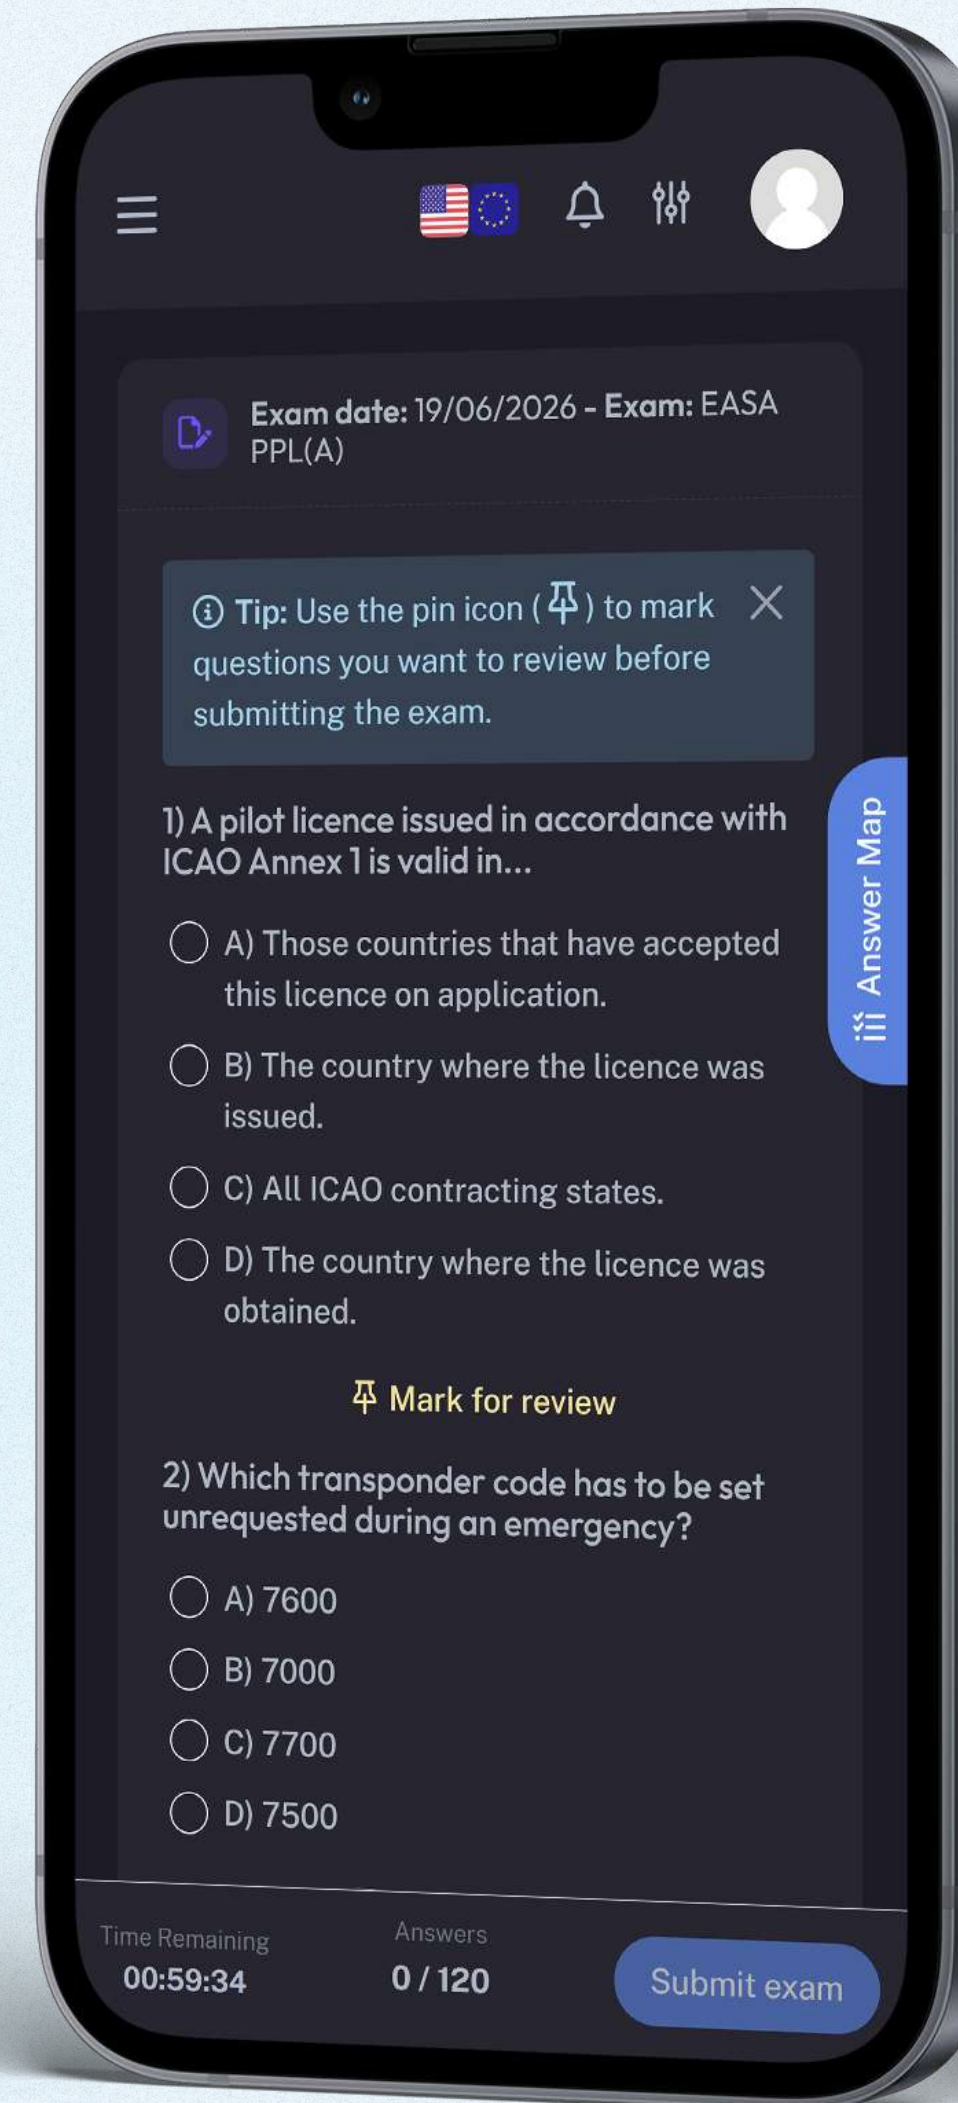

No ads and no limits

Maximum focus and the ability to practice anywhere, anytime, without interruptions or hidden costs.

Smart explanations

Thanks to Artificial Intelligence, every wrong question becomes a mini-lesson. The student doesn't just memorize the correct answer; they understand the "why".

Control, Efficiency, and Targeted Teaching

Provide your Instructors with powerful tools to optimize teaching and monitor real progress.

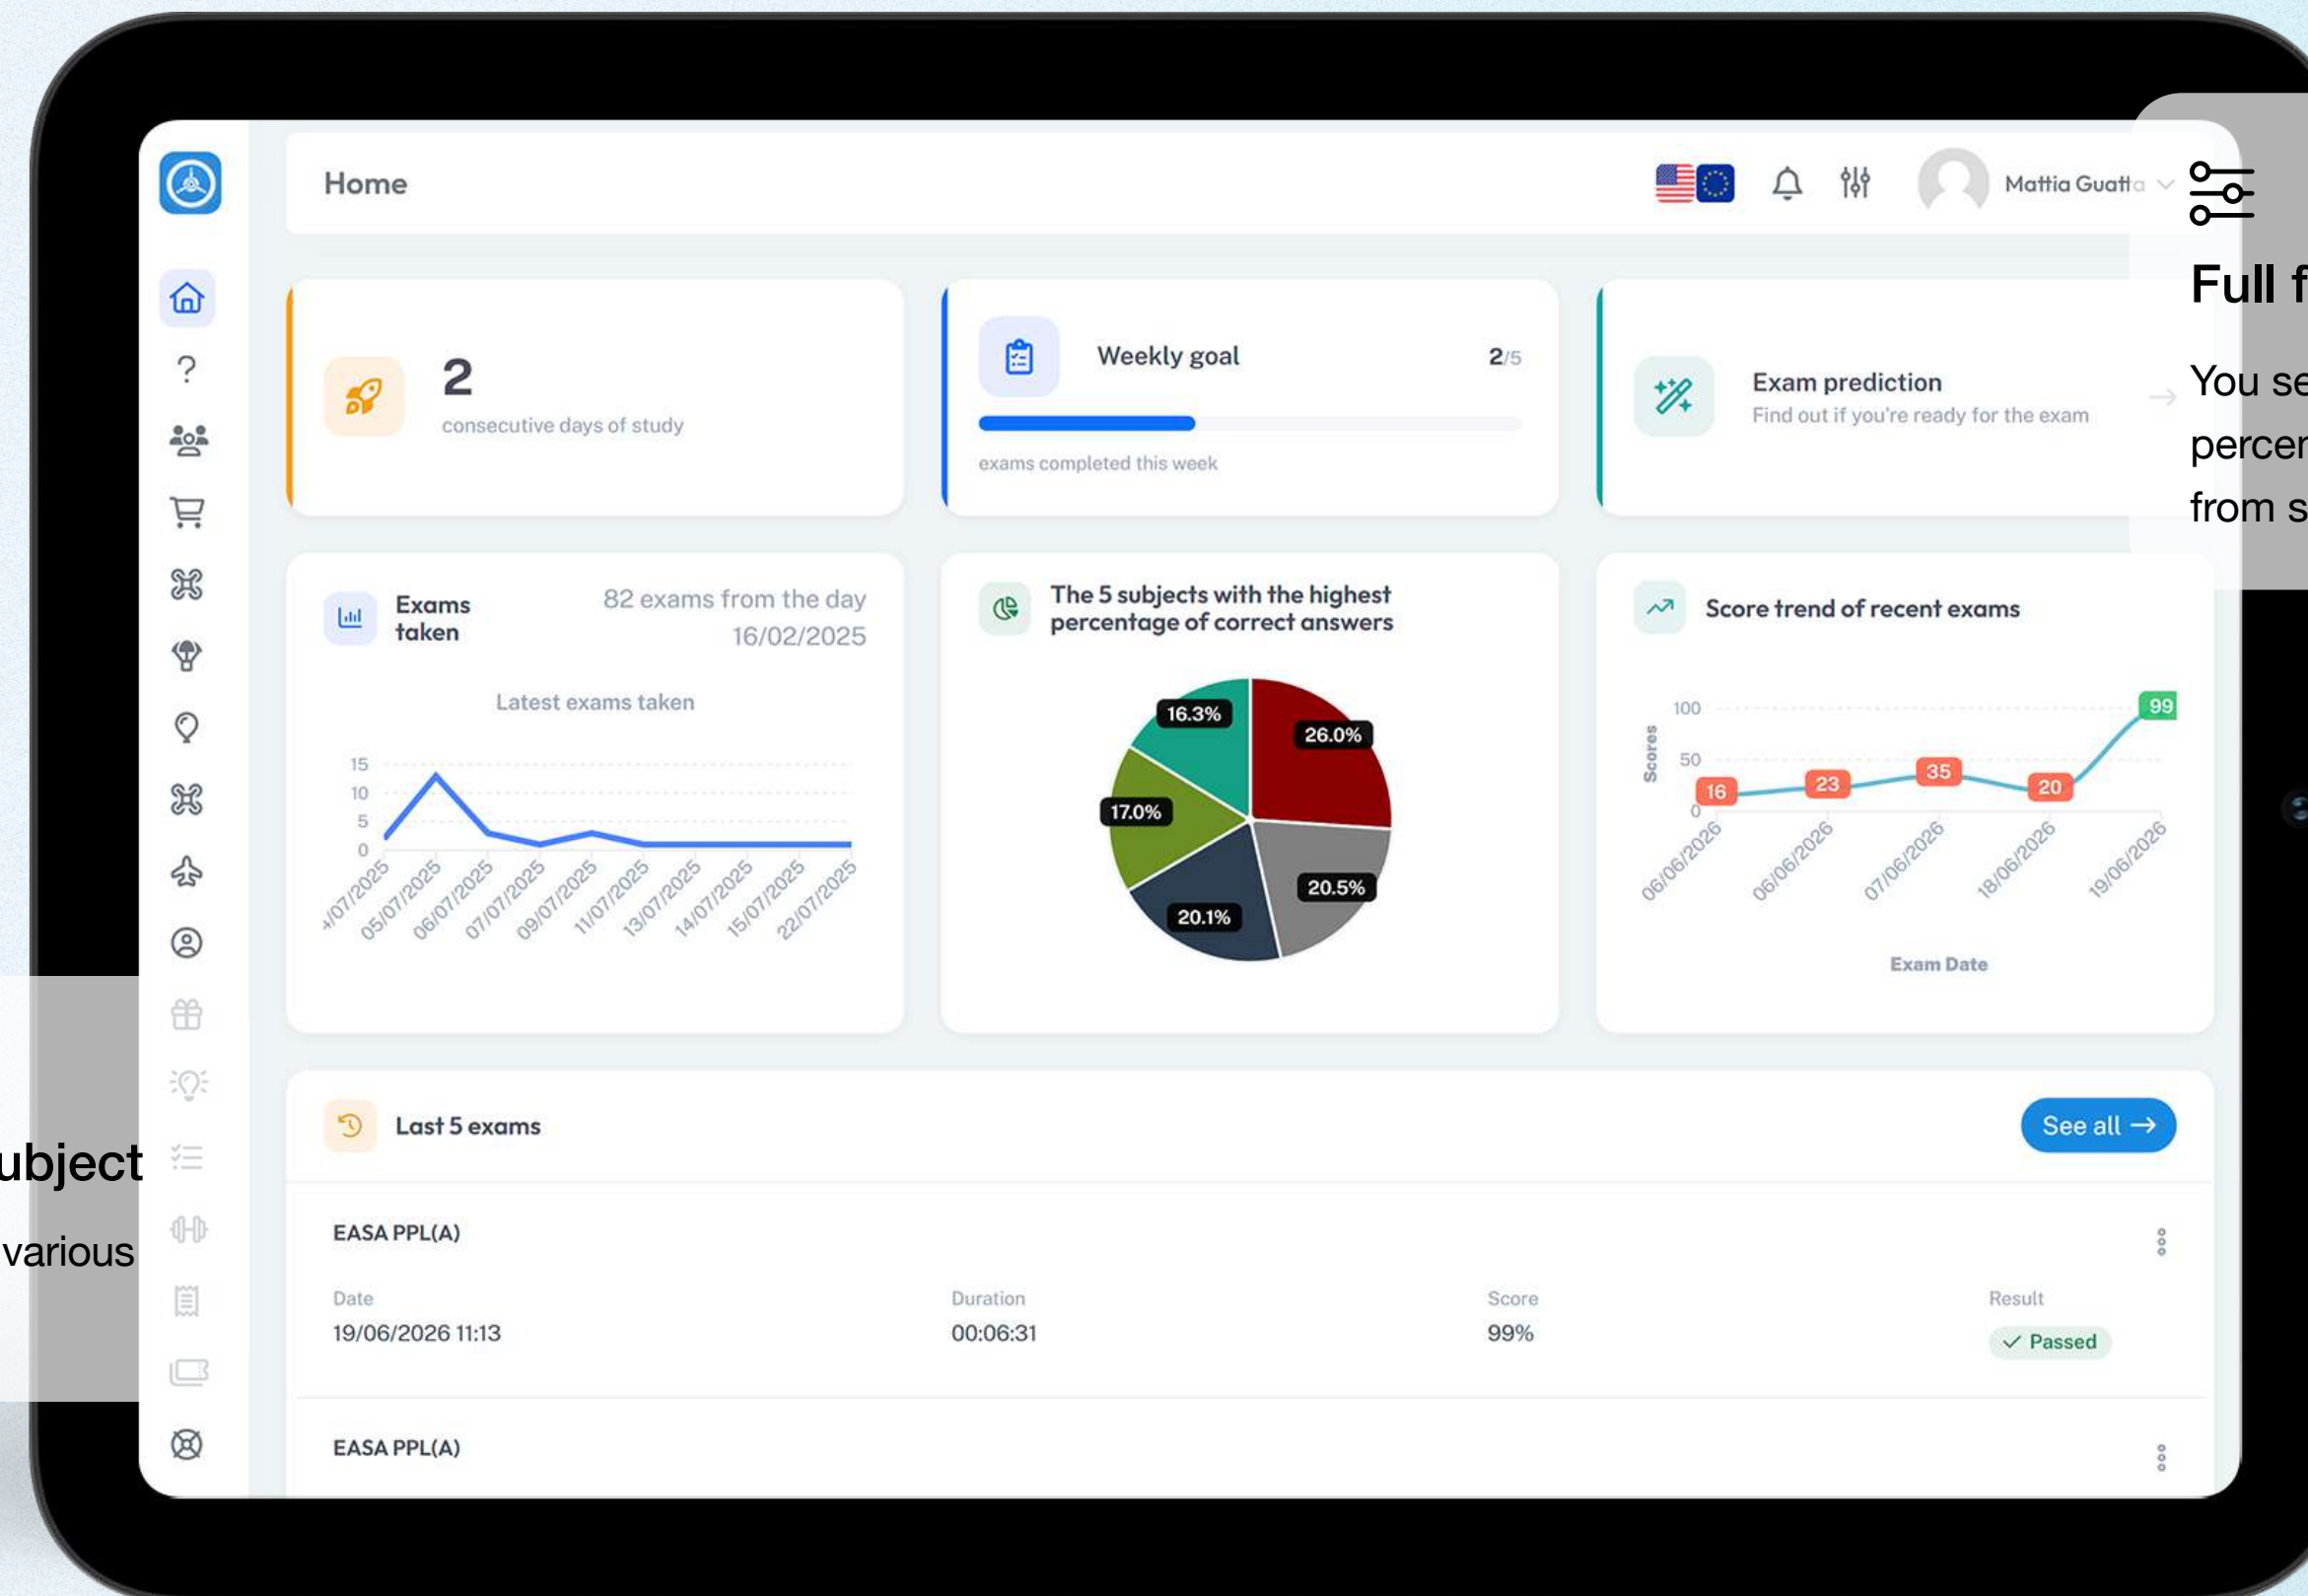

Detailed exam history

Follow the progress of every single student, identify areas of weakness, and intervene in a targeted manner before they become an issue.

Exams customizable by subject

Create specific drills to fill gaps in various topics.

Full flexibility

You set the exam duration and the passing percentage to create progressive tests, from simpler to more challenging ones.

Simple reporting

Results can be downloaded in PDF format or sent via email, making them easy to archive, print, and discuss with the student.

ARTIFICIAL INTELLIGENCE

The Innovation that makes the difference: Artificial Intelligence at your service

Go beyond simple simulation.
Offer a unique competitive advantage.

Question explanation

QUESTION
What is the minimum age to start a private pilot training at a flight school?

Simple explanation: You can start private pilot training at a flight school at age 16.

Key points:

- Training can start before you are old enough for the full license.
- The minimum age to begin training is 16 years.
- Other ages may apply to solo flight or getting the license.

Why this answer is correct: A) 16 years is correct because many aviation rules allow you to begin private pilot training at 16. B) 17 years is often linked to getting a private pilot license, not starting training. D) 18 years is not the normal minimum for starting private pilot training. C) 21 years is too high and is used for other certificates or jobs, not basic training.

Remember: Starting training and getting the license are different things. Minimum ages can change by country and authority.

Success Prediction

Our AI models analyze the student's performance and generate a realistic prediction of their probability of passing the official exam. Objective data to decide together when the time is right to take the exam.

Question Explanation with AI

Our system doesn't just say "wrong". It explains the mistake using clear language, turning every quiz into a learning opportunity and lightening the instructors' workload.

EXCLUSIVE FEATURE

Prediction processed successfully

Subjects to focus on

Communication Aircraft General Knowledge Navigation

Predicted outcome

Predicted score: 55% (estimated range 35-75%). With the current data, this is below the 75% pass mark, so the most realistic expectation today is not passed.

Why this estimate

Your overall average is 29.1%, while the most recent average is higher at 40.4%, indicating improvement. However, results are still **highly inconsistent** (standard deviation 21.7) and the latest attempts include both a very low score on 18/06/2026 and a very high score on 19/06/2026, which suggests performance is not yet stable at exam level.

Focus subjects (highest priority)

- **Communication** (22% correct): phraseology, radiotelephony procedures, and standard calls need structured repetition.
- **Aircraft General Knowledge** (26% correct): systems basics, limitations, and operational knowledge.
- **Navigation** (28% correct): calculations, map/plotting logic, and consistent method for each question type.
